Comments (optional)	quite extensive study - tough read for lay folks - ha. but much appreciated assessment. received post card today with links to read and comment. i live in the community of bright oaks (singles with a stream right behind my house running from royal oaks drive through the other side of the development under bright oaks drive towards community of hunters run) and could not find anything in the study on that stream or any stream running through the original bright oaks community (got close in section 5.5.6). it is my understanding that ward properties still owns the land and stream area, but really don't want it any more. any help in understanding how we are affected within our community would be appreciated. thank you

Comments (optional)	We have major issues from the stream behind our house. On P 46 of Appendices it is indicated that something could not be found during a field investigation. I would be willing to share pictures of the years that have been shared before. We definitely need help here

Comments (optional)	Thank you for informing the public of this. I live right by "outfall 67" and I can tell you that is a popular spot with the neighborhood to throw rocks in the creek and to check out nature. Any maintenance would be appreciated.

Comments (optional)	We have many concerns regarding the bioretention/sand project: 1. Decreased resale value of our home where we have lived for the past 27 years. 2. The location appears to be located extremely close to our

house.

3. Health concerns due to mosquitoes and other pests breeding in standing pond water.

4. Assurance of proper and frequent maintenance to prevent algae overgrowth and unpleasant odor.

5. Appearance that detracts from our beautiful community.

6. Damage to our property from heavy equipment needed for the project.

Comments (optional) Strongly recommend redesigning the stream at Outfall 185. During storms that produce heavy rainfall, the retention pond system is overrun causing extremely large amounts of water to rush into the stream which cannot handle the massive influx. This results in flooding of the walking bridge, path, and neighboring field. It also causes substantial erosion of the stream beds.

Comments (optional)	Concerning SWM000342, there is a restoration proposed to move from an extended detention dry pond to a submerged gravel wetland. I am a member of the HOA board and our small community currently maintains and upkeep's the property. Can someone contact us to further discuss the impact to our neighborhood. A couple of question that come up immediately: Would the county take over upkeep? Who would be responsible for covering the conversion?

Comments (optional)	Hidden Stream crosses over Hidden Stream Dr. Before the developer built the neighborhood, the stream ran free and clear for centuries without any required maintenance. Seems to be a perceptual waste of money.
