FAQs:

- **How do riders get their pass after signing up online?** Passes are sent via text message directly to a rider's phone. They function identically to digital fares purchased in the Token Transit app.

- **What services does the app require for me to buy, store and use passes?** Token Transit uses a data or wifi connection to purchase and activate passes. Token Transit uses location services, if available, to provide agencies with anonymized and aggregated reporting of which bus stops Token Transit is used at. Bluetooth and NFC may be used to perform validation of transit passes.

- **Can I ride without an internet connection?** Token Transit can be used offline. The app requires a data internet connection when purchasing/receiving a pass. It also requires internet connectivity when activating a stored pass. Once activated, the app needs to fetch security information from Token Transit once per day. If you activate and load a ticket in the morning, it will display the ticket offline all day or until the pass expires.

- **Can I connect, link, or use my existing bus pass with the app and use it on my phone?** Riders cannot connect their existing bus passes to the app at the moment. The only way to use a bus pass on the Token Transit app is to purchase it through the Token Transit platform (in-app or through a pass program).

- **Is my phone supported?** Token Transit supports iOS and Android phones. Riders' phones will need cellular data or WiFi connectivity to purchase and activate passes; boarding does not require a connection. You will need storage space on your device for the app as well as downloaded ticket information. Requires iOS 9.0 or later - compatible with iPhone, iPad, and iPod touch. Download Token Transit on iTunes. Requires Android 4.4 and up. Tested for compatibility with the most popular Android devices. Download Token Transit on Google Play.
