

# Group Task:

Place the steps of human reproduction in the correct order.

Cell travels to the uterus  
and attaches to the  
uterine wall.

Sperm travel to the  
cervix, uterus, and into  
the fallopian tube.

Baby will develop.

Egg enters the fallopian  
tube.

Ovulation occurs.

Sexual intercourse

In the fallopian tube, a sperm and egg join to form one cell.

Ejaculation occurs.
